

Durasein Craft Meets Company

Relang Case Study

The Project

Relangtech Office
Zhuhai, China
Completed 2024

- Workplace Sector
- Application: Building facade, wet bar and sink, patio islands
- Material: DM1005 Glacier White, DM5013 Naturally

The Challenge

The Zhuhai plant was designing a rooftop executive office with both indoor and outdoor meeting areas. The team wanted to convey sophistication and style, but the exposed site meant the materials needed to stand up to sun and rain without cracking or fading. Surfaces also needed to be easy to clean between meetings, maintaining a pristine, upscale look.

The Materials

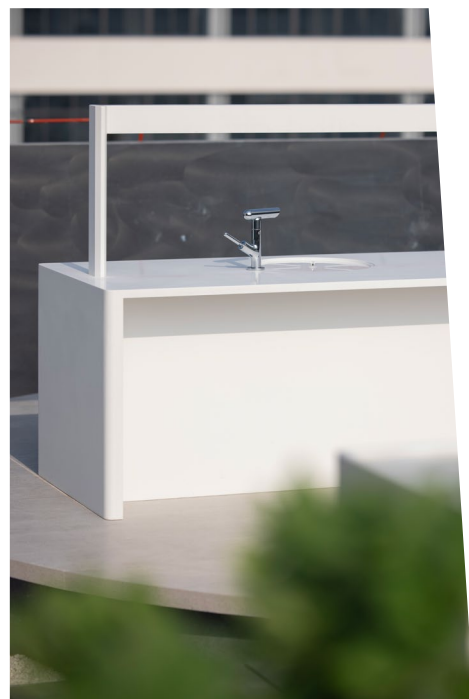

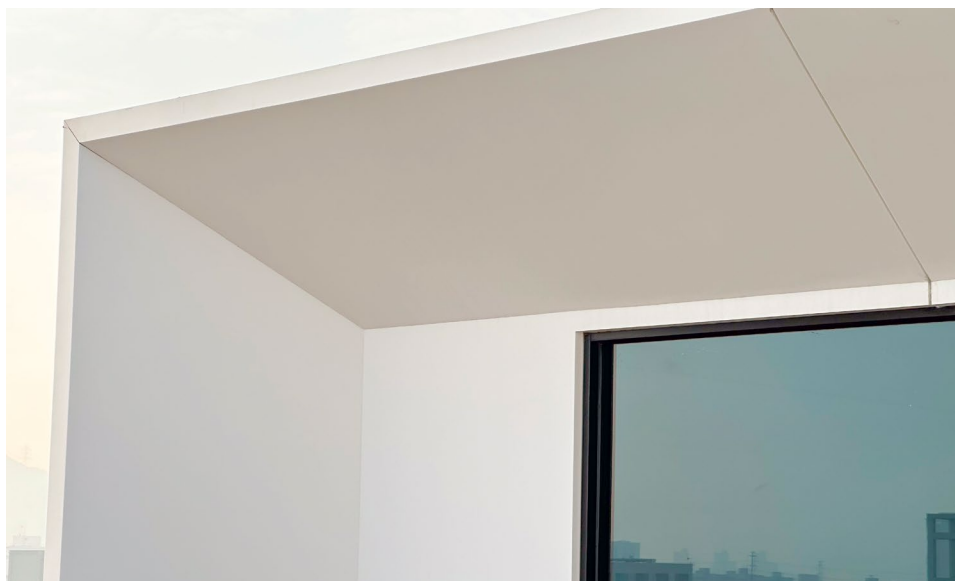

The designers chose Durasein solid surface material for both the façade surrounding the sliding doors and the tables on the patio. Glacier White was used for the wall cladding around the doors, the top of the island table, and the entire wet bar. The designer chose the soft-streaked Naturally for the base of the table.

The Result

This environment provided the perfect opportunity for the company to show off the strength and beauty of its material. Durasein solid surface offers the upscale look the designers wanted along with impressive durability. The bright white tones reflect outdoor light in the mitered corners of the façade to create dramatic shadows, while the softer color of the table base plays well with the surrounding stone path. The material is also impervious to the weather and running water, making it a smart choice for a hard-working outdoor space.

Durasein in the Workplace

If you're looking for a material that's gorgeous, eager to make your creative ideas come to life, and durable enough for daily use, Durasein Solid Surface has it all. Inside or out, it's easy to clean and resists scratches, stains, chemicals, heat, and mildew, making it one of the most hard-working choices around.
