DISCLAIMER

-  We love these rich, saturated colours! But because their heavy pigmentation makes them more susceptible to scratches, dust, haziness, and ordinary wear & tear, than our lighter surfaces. We don't recommend them for horizontal surfaces or heavily-used applications. They're also not covered for ordinary wear & tear under our 10-year warranty.
-  Want a seamless surface? Of course you do. For consistent results with these colours, we recommend using directional fabrication when joining sheets side-to-side or end-to-end.
-  We make the pearl looks you love by using translucent material in the top surface instead of all the way through the material. The layered effect is gorgeous but not meant to be seen from the side, so we recommend mitering or heavily rebating exposed edges with these materials.
-  Our veined designs have colour variations all the way through the material, so we recommend rebating exposed edges for best results. We also encourage you to ask for larger samples or more photos that will give you a better idea how they look at scale. Reach out any time at info.uk@durasein.com, durasein.com/uk, or 0845 603 7811.

Please remember that the colours shown here may appear slightly different from the actual product due to photo and printing processes. We want you to be thrilled with your end product, so please make your final selections using real product samples — yours for the asking at durasein.co.uk.
